3/8" Supply
 Compression

5/8" Compression

This innovative arrestor series combines an angle stop required for many plumbing fixture applications with a built in water hammer arrestor. The unit is designed to control the damaging effects of pressure spikes caused by quick closing valves within a system. The Loose Key feature replaces the exposed handle provided with other angle stops and provides a degree of vandal resistance in public installations.

The **Mini-Angle Stop Arrestor/Loose Key Stop** is manufactured in a chrome plated finish that is optimal for an exposed location. The units label is a friction applied polymer that can be easily removed following installation for a clean, decorative look. It is furnished with either a 5/8" Compression service alignment and a 3/8" Compression fitting to the fixture. Applications include water closets, dish washers, ice makers and lavatories.

NSF/ANSI 61 Certified.
